

Built in Britain by Westwood

Westwood is a manufacturer rather than just an assembler.

Like the vast majority of garden tractor manufacturers, we buy our engines from Briggs & Stratton and our transmission from Peerless, but apart from these, over 90% of the components that go into our tractors are manufactured in our Plymouth and Liskeard factories.

It is this policy of self sufficiency backed by a highly skilled and motivated workforce that has made Westwood products unbeatable for "value-for-money" and quality. It is this policy that has allowed us to keep our prices down. In five years that has seen inflation of over 70% Westwood prices have risen less than 30%.

Westwood garden tractors and accessories outsell all competitors in

Britain and are making considerable inroads into European markets – particularly France, Germany and Belgium.

We design our products to give maximum life with minimum servicing, but, like all powered machinery, they do require some attention from time to time. For this reason, we sell our machines through a network of distributors and dealers, who are well equipped with spares and service facilities.

If there are any questions you have, or if for any reason you are unable to see the Westwood machine of your choice, please ring Plymouth 334545 where our Customer Liaison Department will be pleased to help you and/or put you in touch with your nearest dealer.
